RADIOLOGIC SCIENCES

Program Descriptions
The Bachelor of Science in Radiologic Sciences and the Bachelor of Applied Science in Radiologic Science programs at Colorado Mesa University prepare individuals for certification and professional practice in the Radiologic Sciences. Radiologic technologists are an important part of the professional health care team, providing physicians with medical images that are vital for the diagnosis and treatment of injury, degeneration and disease. The BSRS program is accredited by the Joint Review Committee on Education in Radiologic Technology (JRCERT).

Bachelor of Science in Radiologic Sciences
The four-year Bachelor of Science program provides educational experiences to prepare a professional radiologic technologist to practice in a variety of health care settings. After meeting the ethics, education and clinical competency requirements, graduates are eligible to take the certifying examination from the American Registry of Radiologic Technologists (ARRT). The program integrates theory, practice, and science with a broad liberal arts education. The program is designed to deliver quality education in both the classroom and clinical settings.

Bachelor of Applied Science in Radiologic Sciences
The Bachelor of Applied Sciences (BAS) in Radiologic Science provides certified radiologic technologists the opportunity to obtain a bachelor degree and to advance in specialty areas in the field of radiologic technology including magnetic resonance imaging or computed tomography. After meeting the ethics, structured education and clinical competency requirements, graduates are eligible to take the appropriate certifying examination from the American Registry of Radiologic Technologists. This can lead to greater employment opportunities, increased compensation and job security. The program is designed to deliver quality education through online, distance education in the didactic and clinical arena.

Professional Certificates in Radiologic Sciences
The Radiologic Sciences program offers certified radiologic technologists with an associate or baccalaureate degree the opportunity for post-primary certification in magnetic resonance imaging or computed tomography. After meeting the ethics, structured education, and clinical competency requirements, graduates are eligible to take the appropriate certifying examination from the American Registry of Radiologic Technologists. This can lead to greater employment opportunities, increased compensation, and job security. All coursework is in an online format.

Special Requirements
Students applying for admission into the program must be admitted into the general University. Admission to Colorado Mesa University does not guarantee admission into the radiologic sciences programs, which require a separate application. Please contact the health sciences department for additional information.
